Hi Julie,

Per Barbara and Vicki's request, I am attaching some materials on MOA information in the respiratory tract (RT) that might be useful in developing your search strategy. The 10 page draft of the noncancer MOA in the RT includes information relevant to inflammation and immune responses, as well as other changes in the RT. All of the references should be in HERO (my reference list started from references in other draft sections), but unfortunately this document has not yet been "HEROized". If there are papers of interest you could not find in HERO, I have all of them on my computer and can provide the pdf (as long as that is okay with Vicki?). As mentioned by Barbara, I too hope that your search will be able to capture both the relevant studies from this draft as well as other relevant papers I may have missed.

In addition, I attached my SOT ppt, which has the studies arrayed in the tables in a slightly different fashion, which may be of use to you. I also attached Jason Fritz's SOT ppt and draft on RT cancer MOA, both of which may contain additional information or studies related to inflammation and oxidative stress.

-Andrew

Hi Vicki,

Thank you for providing this information. We would like to begin the search for the subject matter expert. Please send the information that we discussed during our conference call regarding formaldehyde and inflammation and oxidative stress. It would be also useful to know the critical studies that have been identified to date, so that we can evaluate potential keywords for the targeted search strategy.

Best regards,

Julie

Hi Julie,

This cost estimate is approved.

Thanks

Vicki

Hi Vicki,

The cost estimate for the formaldehyde literature search is attached for your review. I have included an estimate of the subcontractor costs, but this estimate may need to be revised at the time the subcontracting agreement is established with SRC. Our first step will be to find the expert that can fulfill this role. Please let me know if you have questions or need further information.

Thanks very much,

Julie
